Design that connect

THE ESSENCE OF APLIMET

Since more than 15 years, Aplimet is famous for its high quality products. In a decade, Aplimet has greatly evolved to become a national and international model in the beer dispensing design and manufacture.

Our products are capable of connecting with the consumer thanks to their innovative designs, the quality of their technology and their premium customization, which only applies to new generation products.

Open to the innovation and the international development, Aplimet is synonym of experience, quality and design. Since a few years, Aplimet offers to its clients its expertise in the beer dispensing sector.

TIME HAS COME TO SHOW US AS WE ARE. IT'S...

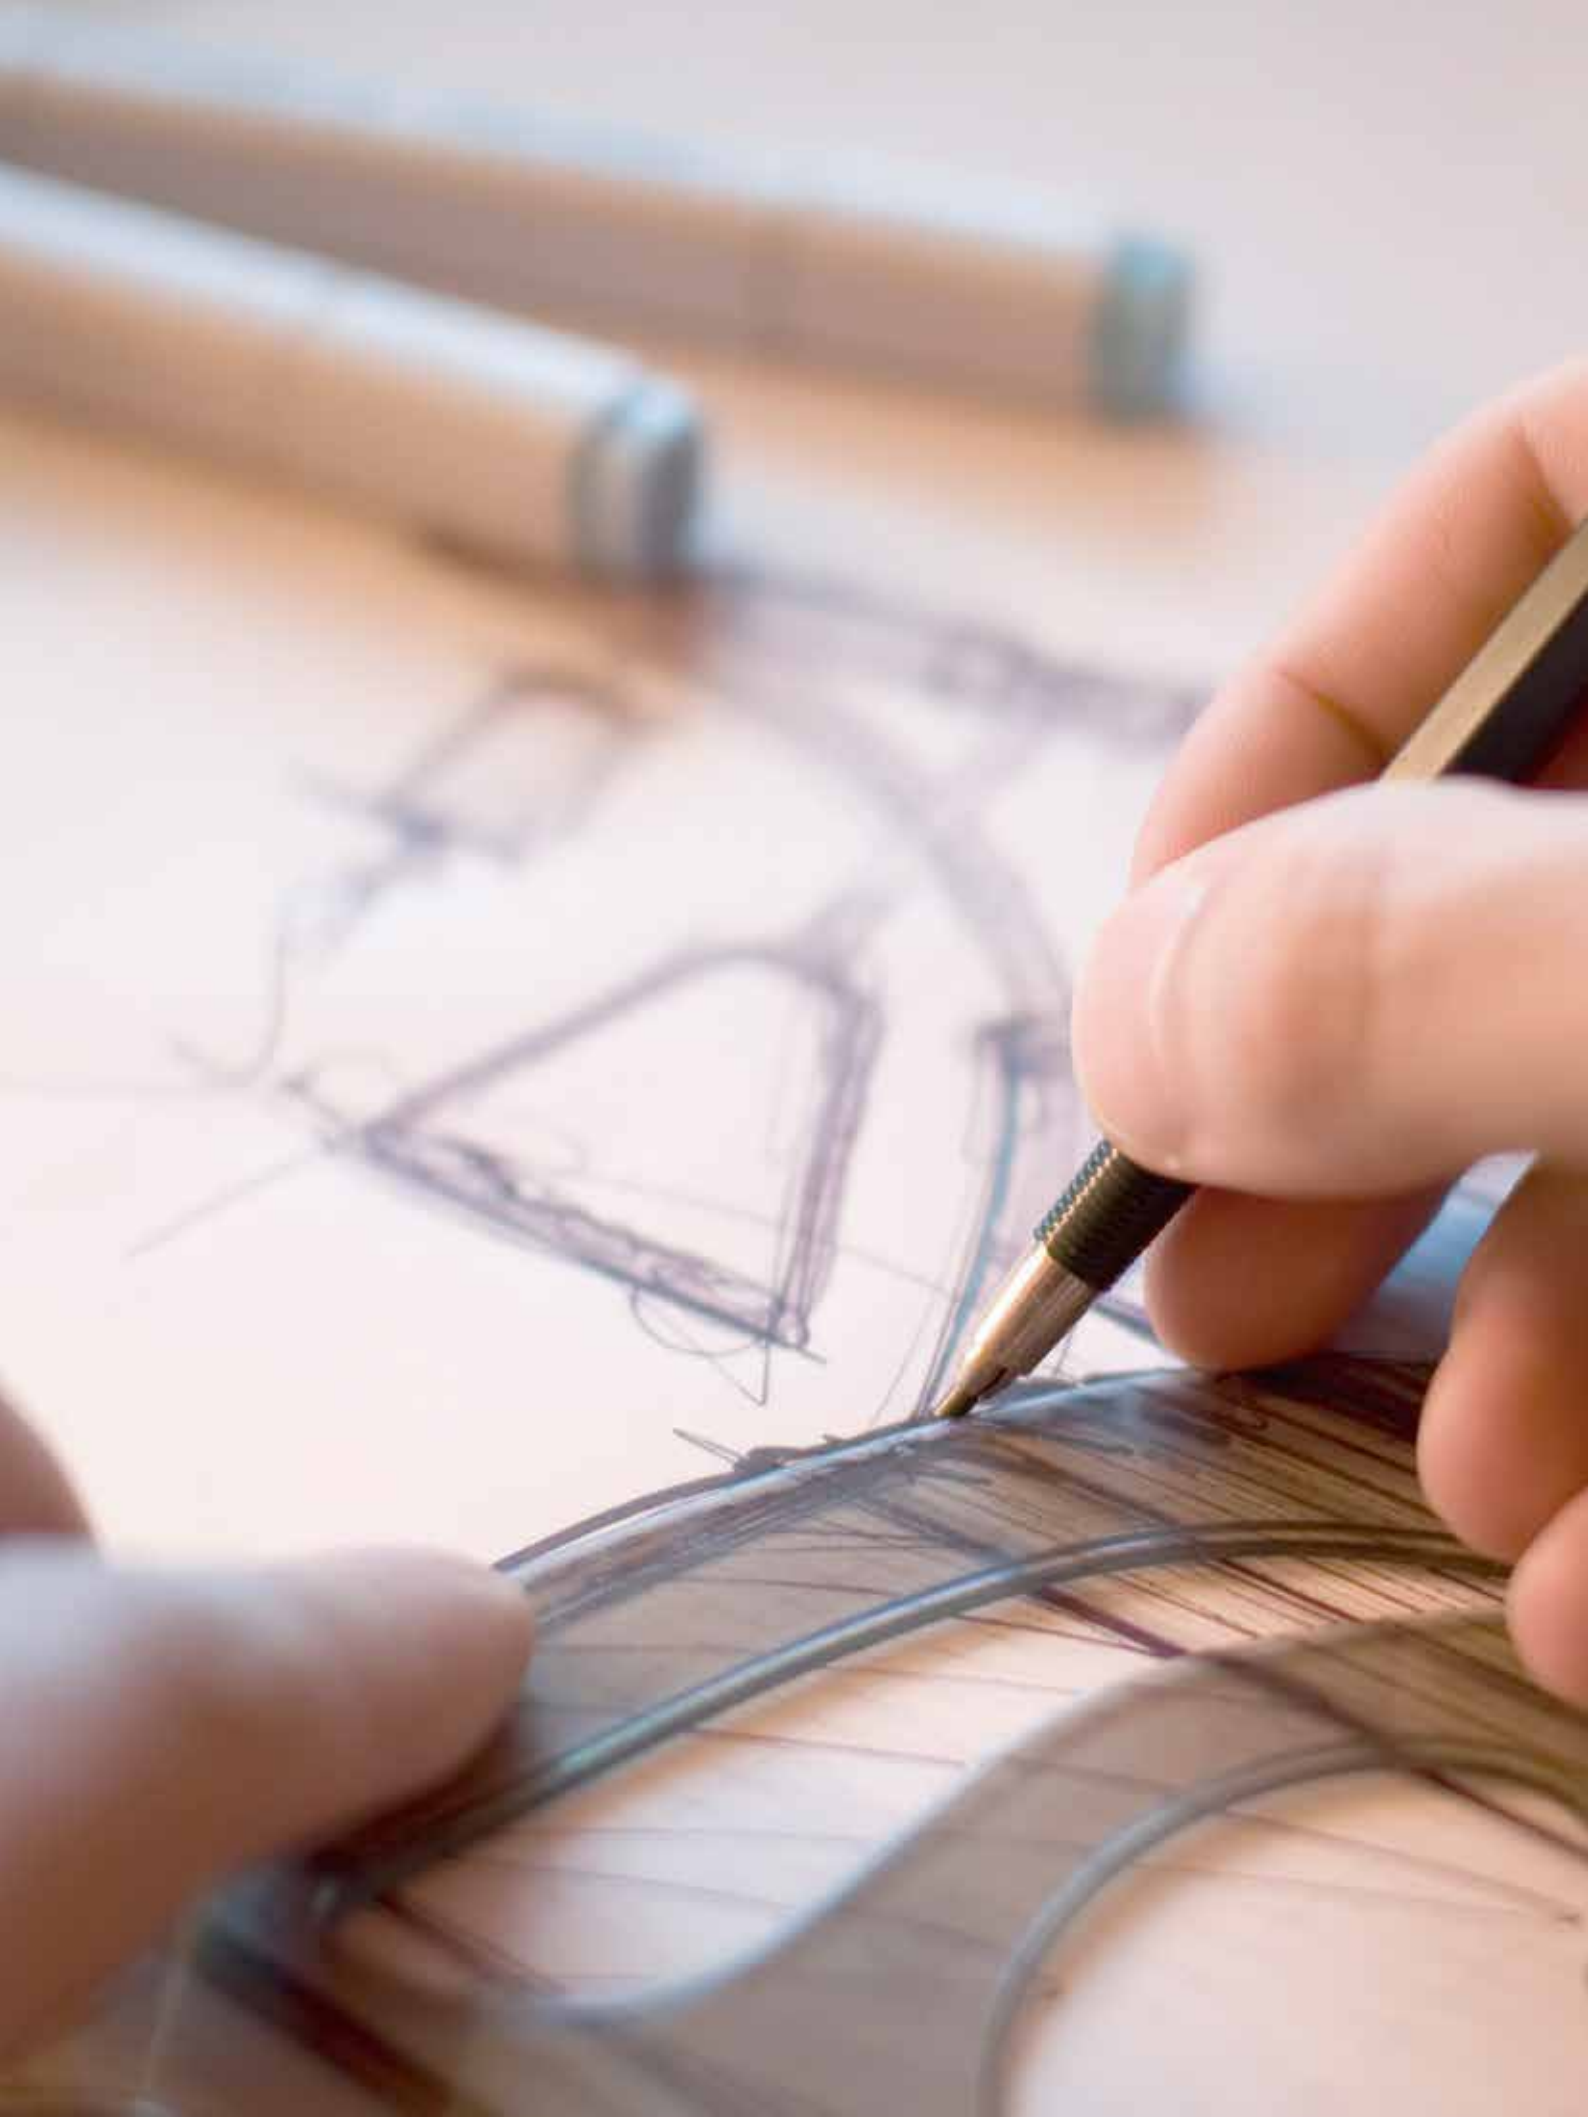

Time for emotions

A design is only design until it is applied to improve a product. From our experience, Aplimet now knows that the design, apart from being functional, needs to transmit, evoke and catch the public attention. Only this way, we would manage to connect with the consumers.

Aplimet believes in a new generation of tailor-made beer towers to fully comply with the requirements of its clients. Designs that captivate consumer's attention and that completely catch their eyes.
Time has come to transmit Aplimet's personality and character through its designs.

Design is made visual

Thrilling design and quality products

Aplimet always keeps abreast of the latest designs and technologies. For this reason, one of our objectives is to equip all our beer towers with the newest technology and with an emotional design in order to connect with the people. Aplimet designs are able to arouse emotions and fully attract the attention.

Modern technology owes ecology

Environment and sustainability

Fully aware of the importance of the environment and the sustainability, Aplimet carries out its corporate activities optimizing natural resources and minimizing their impact.

The best way to predict the future is to create it!

Operational technology and flexibility

Our corporate philosophy is not only focused on new technological and technical enhancements, but also on our clients' requirements, more emotional, customized and tailor-made. We progress proactively taking into account the future generations, without forgetting the quality we have always aimed.

The human connection is the key to success

Connectivity

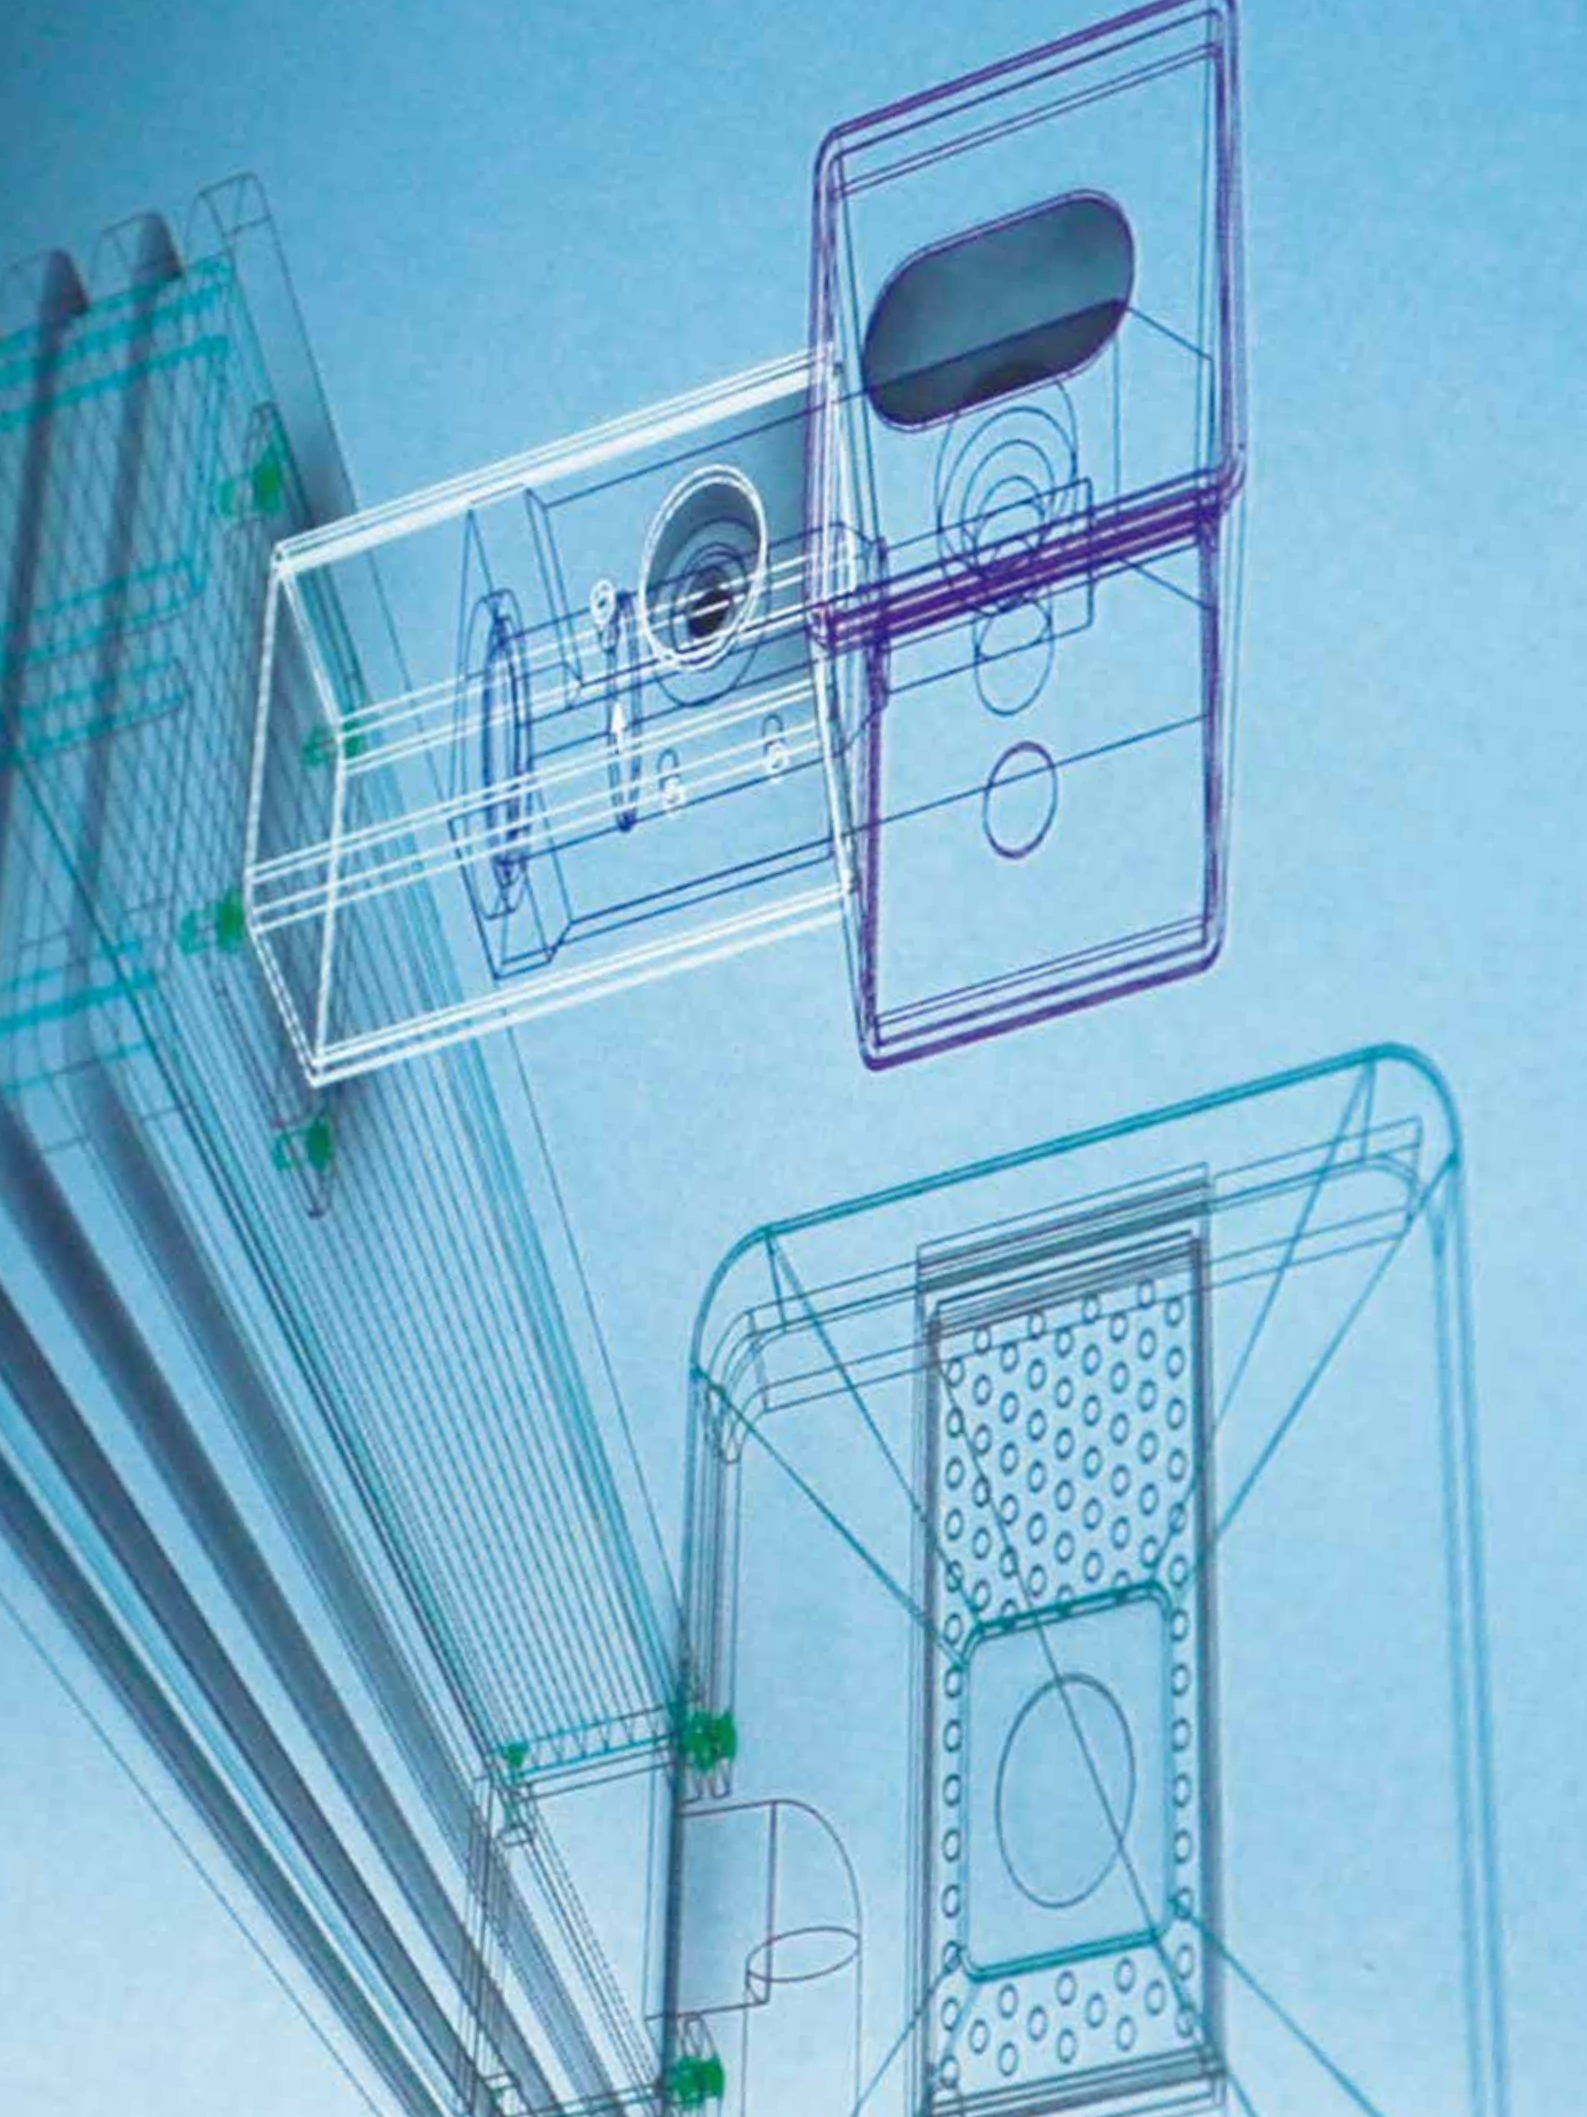

Aplimet follows the latest trends in design and technology. Modern lines, new materials or last generation transformations, with the perfect balance between aesthetic and technology, Aplimet synchronizes with an increasingly demanding public. An appealing design always wakes people's interest.

Aplimet pays particular attention to the four main elements giving shape to a beer tower (tray, body, tap and dispenser), creating an integrated «whole» and harmonious tower. An excellent combination of design and technology.

But Aplimet goes beyond this. Because our taps and towers revolutionize a sector where details and technical improvements make the difference. Unique advances that place us as an innovative company in our industry, such as the integrated water-cooled tap or the seamless integration of displays in the dispense fonts, offering a new communication channel for brands and allowing interaction on-site with customers. Twits, Facebook posts, likes on Instagram, news, new logos, moving images... all in real time!

New designs with the latest technology to connect more and better.

CATALOGUE

PREMIUM NEWS

Our proposal presents a new way to reach consumers: digital signage. This allows to create a high impact on communication at the right time with your audience, at the point of sale.

Stage series

THE ARCH

Let's be creative and imagine one second that the bar counter becomes malleable like clay. We could create a kind of « arch » and integrate a display in it. The symbolic arch-shape conveys to the tower a unique plasticity. When adding technological elements to it, it allows a more direct and smoother communication with the clients.

Satellite Series

AGORA

This beer tower is unique due to the combination of its classic and modern elements. As it were a time-lime, the tower has vertical and simple shapes and lines. The stylish displays integrated and adapted to the geometric requirements of the beer tower provides a real technological character to the product. Geometrical shapes that fit to new tendencies of communication at the sale point.

Role switching

ILUMA

When a design intrigues, it turns heads. When the body and tray of a tower are switchable, it maximizes the impact arousing the curiosity of the observer. When, on the top, the slots (on both sides of the tower) flood with light, it greatly increases the excitement. A fascinating aesthetics appreciated by everyone in love with the elegance and subtlety of a great design.

CATALOGUE

STANDARD NEWS

Novelty and relevance: the perfect combination for a design that excites. Because the consumer experience through our products is above all else.

ZARAGOZA

Following the undisputed success of our beer tower Filo, we designed a new version with more modern and simpler lines to give it more cachet.

To meet the requirements of each client, we designed this model with a bigger and higher base offering a great variety of finishes. A wide range of possible finishes is also available, converting this beer tower as a “flexible” option to every brand, bar and counter.

FINISHES AND OPTIONS

All finishes

ZARAGOZA MINI

It can be considered as the “little sister” of the Zaragoza tower. This version counts with a bigger base, allowing wider possibilities of automation to satisfy the needs of each client. Thanks to its small format, it is also common to use it to pour water, cider or wine.

FINISHES AND OPTIONS

All finishes

ZARAGOZA FLEXIBLE

Here is another version of the Zaragoza model, but this time with even more options. On the same tower, you can have 1, 2 or even 3 taps plus 1, 2 or 3 corporate logos. It also offers the possibility to put various types of logo holders (with or without light, different diameters and geometry, etc) adaptable to almost whatever brand format.

INDIVIDUALS

MEL 50 H65

This tower is an updated version of the MEL one, made of stainless steel tube, higher and easier to fix onto the bar counter. It thus offers a wide range of finishes and heights.

MULTITAPS

BERNA

The rustic and old aspect reminds us about traditional abbeys. This tower with a cross, old matt copper finishes and old matt brass details, makes it one of the best and typical beer towers.

BRIDA

This tower is made of copper and brass. Its marine and brass flanges with nuts give it a warm and brewing aspect. It permits to pour a great variety of beers in whatever multi-brand premises.

MULTITAPS

ANTIGUA

Inspired from a old dispenser, we have added this model to our catalogue as it is a traditional reference. According to the brand and the local where it is going to be installed, you would have the choice between different finishes to give it either a modern or rustic aspect.

MULTITAPS

CALIFORNIA

It is another of our successful multiproduct tower. Made of a stainless steel round pipe, this large dispenser is highly stiff and robust. As for the San Francisco's tower, its great adaptability makes it very famous in national pubs and locals specialized in artisanal beers.

MULTITAPS

SAN FRANCISCO

It is one of the most successful multiproduct towers. Thanks to its stiffness, robustness and square tube stainless steel manufacture, this large dispenser offers the possibility to put a lot of different taps and brands. The secret behind the San Francisco's tower lies in its great adaptability, which make it very famous in pubs and locals specialized in artisanal beers.
